

Newsletter April 2011

امرحب

Are you interested in sending SMS messages in Arabic or Chinese?

We can help. 2sms has implemented a service to support SMS messages written using non-Latin characters. One Unicode text message can only contain 70 characters, therefore when sending messages longer than that using characters outside the GSM 7-bit alphabet, the charges will vary. Call our support team on **01234 757 800** to get the service set up and running on your 2sms account today.

Archive sub-accounts

In response to a customer request, 2sms will be implementing a new account maintenance feature allowing master accounts to archive their sub-accounts. Unused credits will be credited back to the master account and the sub-account will be deleted from the list. The new feature will be available as of mid July. Contact support@2sms.com for more details.

Did you know that...

You can set up a fixed message which can be used to quickly select regularly sent messages without the need to type them out each time. Simply go to www.2sms.com and log in using your account details and follow these steps:

1. Select 'Fixed Messages' button
2. Type in the Fixed message
3. Click 'Add/Update'

This message will now be available from the drop down menu on the website, accessible when composing your SMS.
