

2sms Web Services Solution

About 2sms

2sms allows business customers to send text messages from your computer to cell phones anywhere in the world. We help customers improve operations, demonstrate duty of care, and react more responsively to customers.

Text messaging reaches more people than email and faster than calling.

2sms Web Services Solution Overview

The 2sms Web Services solution is one of 25 software solutions that act as a bridge from your corporate systems to the SMS messaging network. Visit www.2sms.com/software for more information.

A web service is a collection of protocols and standards used for exchanging data between applications or systems. Software applications written in various languages and running on various platforms can use web services to exchange data over computer networks like the Internet. This interoperability is due to the use of open standards.

The W3C defines a **Web service** as a software system designed to support interoperable Machine to Machine interaction over a network. Web services are frequently just application programming interfaces (API) that can be accessed over a network, such as the Internet, and executed on a remote system hosting the requested services.

2sms offers web services to allow customers to send text messages, run reports and manage their account. For details of the service visit:

Service URL : <http://www.2sms.com/SMSWebService/SMSService.aspx>

WSDL URL : <http://www.2sms.com/SMSWebService/SMSService.aspx?WSDL>

Customer Doc #	SAL-174
Issue No./Date	1.0 11-Feb-07
Classification	N/A
