

Providing Affordable, Effective Communications Solutions

TeamData

2sms provides a suite of SMS-enabled, mobile internet based data services, branded as Team Data, which can help to improve the speed, efficiency and therefore profitability of communications in your business.

Benefits

TeamData allows business customers to collect and publish data from any computer to a mobile phone anywhere in the world. TeamData makes businesses more efficient because you can react more responsively to customers and increase business productivity.

Why TeamData | In today's ever increasing mobile business environment it is imperative that organisations obtain business information from employee and customers at lightning speed. It is impossible to gather information via email or via phone call from a large group in a timely manner using these traditional communication methods. TeamData can provide you a competitive edge by allowing you to collect and share information fast with minimal resources.

TeamData Capabilities

Collect Data

You can prepare short question sets on a web portal and then send out a text message, with an embedded hyperlink, which will allow the respondent to access and answer the questions via the web portal.

You can send information requests, or short surveys to customers, staff or suppliers, track and collate responses and issue reminders to respondents who have not submitted the required information. Respondents can complete the information quickly using the browser functionality of their mobile handset, or by accessing the internet from any PC.

Publish Data

You can send out your collected data or other information quickly and reliably to your field or remote workers. By utilising Publish Data function in TeamData, you can simply and effectively send the information using a text message with an embedded hyperlink to alert the recipient, who can then access the information via a web portal.

Info Service

Info Service function allows you to make company news, news feeds and other information such as company address books, available to mobile and remote workers.
